Commercial Grade LED Festoon Lights 0.5M Spacing

Low Voltage 24V | Custom Lengths | IP65 | Black or White Cable

This is our most popular configuration for festoon lighting. Two globes per meter or 50cm festoon spacing produces the ideal amount of mood lighting for bars, hotels, restaurants and much more. Our festoon lighting is sold by the meter, meaning we can custom make any length you require, generally by the next business day!

Our extra low voltage 24V LED festoon lighting is commercial grade, meaning it’s designed to withstand harsh outdoor environments.

Unlike other cheap festoon lighting on the market, our festoon lights are made with thick, durable and weatherproof rubber cable, rather than PVC.

Our Filament style LED globes are also extra durable. They mimic the look of “old school filament” or “Edison” globes, but they’re actually a super efficient LED and made from break-resistant plastic, rather than glass. Being low voltage, they’re also the safest option for festoon lighting. They can be installed virtually anywhere with their IP65 rating. Weatherproof, UV resistant, Low Voltage & also backed with a full 2-year warranty!

To power these lights, you will require one of our MeanWell LED Driver, and don’t forget a Driver Connection Lead.
